PROFESSIONAL SUMMARY

Python Developer with hands-on experience in Business Process Automation, SAP automation, and Generative AI. Skilled in building end-to-end automation solutions and AI-powered applications including RAG, Text-to-SQL, and intelligent agents. Strong expertise in Python, Selenium, and data processing with a focus on improving efficiency and reducing manual effort in business workflows.

WORK EXPERIENCE

Executive (IT) | IMS Company (24 Months)

- Provided ERP system support and managed day-to-day operations ensuring smooth business process execution.
- Handled data validation, issue resolution, and supported internal teams in maintaining workflow accuracy.
- Contributed to process improvements by streamlining system-based operations and reducing manual effort.

Python Developer Intern | Nine A Business Connect

- Worked on Python-based development and automation-related tasks.

PROJECTS

Business Process Automation

Coupa Invoice Automation System (Python, Selenium, Tesseract OCR, pdfplumber, SQL, SMTP, OpenPyXL)

- Built end-to-end invoice automation using Python and Selenium for the Coupa platform — extracting data from PDFs, automating PO-based invoice creation with validation logic via pyodbc, SMTP notifications, and OpenPyXL reporting, reducing manual invoice processing effort significantly.

Enterprise Holdings Data Automation System (Python, Selenium, Tesseract OCR, SQL, CSV Processing)

- Developed automation using Python and Selenium (Edge WebDriver) to log into an internal portal, solve CAPTCHA using Tesseract OCR, extract holdings data, and process CSV files with validation and logging — enabling reliable, hands-free data extraction and database storage.

Enterprise SAP Invoice Posting Automation System (Python, SAP GUI Scripting, Django)

- Built SAP automation using Python and SAP GUI scripting (win32com) to post vendor invoices (FB60), covering header, line items, tax, payment, and file attachment (CV01N) workflows — eliminating manual data entry across end-to-end financial posting processes.

E-commerce Reporting Automation System (EasyCom) (Python, Selenium, Pandas, NumPy, SQL, SMTP)

- Developed end-to-end automation to extract Purchase Order and Tax reports from EasyCom with retry mechanisms, data cleaning via Pandas/NumPy, database insertion using SQLAlchemy, and automated email notifications — reducing report generation time from hours to minutes.

Customer Review Analytics Automation System (Python, Selenium, Pandas, Translation APIs, Excel/CSV)

- Built web automation to extract and process multilingual customer reviews from e-commerce platforms, applying translation APIs, rating aggregation, and structured Excel/CSV outputs to generate actionable product performance insights for business reporting.

Generative AI & LLM

RAG-Based News Question Answering System (Python, LangChain, Groq LLM, HuggingFace, Streamlit)

- Developed an AI-powered question-answering system using RAG — combining LangChain, FAISS vector search, HuggingFace embeddings, and Groq LLM to retrieve and generate source-attributed answers from multiple web articles via an interactive Streamlit UI.

AI-Powered SQL Query Assistant (Text-to-SQL) *(Python, LangChain, Groq LLM, SQLite, Pandas, Streamlit)*

- Built an AI system using LangChain with few-shot prompting and Groq LLM to convert natural language into SQL queries — enabling non-technical users to interact with SQLite databases, execute queries, and receive results with plain-language explanations.

LLM-Based Intelligent Agent with Tool Integration *(Python, LangChain, LangGraph, Groq LLM, Streamlit)*

- Developed an AI agent using ReAct architecture with LangChain and LangGraph to dynamically orchestrate tools (Wikipedia, web search, calculator) — enabling reasoning-driven, real-time query resolution with an interactive Streamlit interface.

Web Development

OneBite – Online Food Ordering Platform *(HTML, CSS, JavaScript, Bootstrap, Python, Django, MySQL)*

- Developed a full-stack food ordering platform with search, filtering, and sorting features using Django and MySQL — implementing user authentication and an admin panel for complete menu and user management.

Ice Cream Parlour Management System *(HTML, CSS, JavaScript, Bootstrap, Python, Django)*

- Built a responsive web application for browsing and managing ice cream products using Django — implementing backend product management, user handling, and an admin control panel with a clean, user-friendly interface.

TECHNICAL SKILLS

Programming Languages: Python, Java

Frameworks: Django, Bootstrap

Frontend: HTML, CSS, JavaScript

Databases: MySQL, SQLite, SSMS

Automation & RPA: Selenium, Process Automation, SAP GUI Scripting

Generative AI & LLM: LangChain, LangGraph, RAG, AI Agents (ReAct), Prompt Engineering

Data Science & Analytics: NumPy, Pandas, Machine Learning, Data Processing

Software Tools: MS Excel, Tableau, Streamlit

Other Technologies: Tesseract OCR, pdfplumber, RapidFuzz, SMTP, CSV/Excel Handling

EDUCATION

B.Sc. IT – Mumbai University | 2017–2020 | CGPI: 8.07 (A Grade)

PROFESSIONAL COURSE

Data Software Engineering – ITVedant Education

CERTIFICATIONS

- IBM Python for Web Development
- Foundation with SQL
- Master in Data Software Engineering
- Web Designing Essentials
- Python Essentials

KEY SKILLS

Problem Solving • Team Collaboration • Time Management • Critical Thinking
